

BREAST ULTRASOUND EXAMINATION

CLINICAL INFORMATION

Clinical History:

Prior Biopsy:

If yes, Results:

COMPARISON STUDY

Prior ultrasound examinations: Available If yes, then date of last ultrasound:

FINDINGS

1. Tissue Composition: Homogeneous background echotexture-fat
2. There is/are following circumscribed hypoechoic mass (es):
 - A. At o'clock position, cm from the nipple, measuring cm,
previously cm.
 - B. At o'clock position, cm from the nipple, measuring cm,
previously cm.
 - C.
3. Associated features: None . Vascularity is absent.

IMPRESSION

Stable appearing probable benign mass (es) in the breast is highly suggestive of complicated cyst.. Ongoing imaging follow up is recommended in 6 months time.

BI RADS: 1- Negative Biopsy should be considered.

Note that for BI RADS 3 lesions need to be followed up at 6, 12 and 24 months to establish an overall 2 years of stability.
